

**Weatherproof housing according to IP65 made of acrylic for
LED illuminated displays LWA-90 and LWA-130**

Housing dimensions:	W350 x H150 x D65mm +40mm protrusion for LWA-90-I W400 x H200 x D65mm +40mm protrusion for LWA-130-I
wall thicknesses	Upper and side sections 6mm, rear wall 10mm
Seal:	Circumferential between the upper section and the rear wall

Assembly:

1. Screw the rear wall incl. the pre-assembled V2A subconstruction base onto the wall using the mounting materials included in delivery.
 2. The electrical feed line is positioned in the centre lower edge of the weatherproof housing, for which purpose the housing upper section features a recess for the cable gland. Guide the line from below behind the subconstruction base and through one of the two holes there.
 3. Fasten the empty housing of the LWA-90/130 to be used onto the subconstruction base with the enclosed cylinder head screws M5x10, and install the LWA-90/130 in accordance with the instructions.
 4. Mount the upper section of the protective housing and tighten the 2 to 4 screws on the cover only approximately hand-tight (!) so that the thread in the rear wall is not overstrained.
- For cleaning purposes, only use a damp cloth and no aggressive cleaning agents.
